LASS Simulator

開發步驟

- ▼確認執行環境
- ✔ 架構設計
- ■ 系統基礎帶起
 - CLI start
 - Log start
 - CFG start
 - simulation installation check
 - unit test start
 - start car, Deposition, status with simulation
 - plot total value
 - export ESRI for single and animation
 - ▼ 支援初始化地理位置設定
 - ✓ limit wind effect

宋需

希望能有效模擬 PM2.5 感測現象, 進而提供一些實驗設計參考

規格

模擬功能

能模擬因人口,車輛的影響

能模擬特定燃燒,工廠排放的影響

能模擬境內與境外之間的移動特性,比方說境外污染影響

能區分高空與低空污染

能模擬下雨,沈積,風,颱風的效應

能模擬特定氣候效應

能模擬特定區域現象

模擬區域特性如地理特性能有標準介面以提供匯入定義

模擬結果能與目前實際感測值做比較

能做小時,天,週,月,年的模擬

系統功能

開源,分享

主設計使用 Python

使用 SimPy , NumPy

使用者參數集中管理與設定

核心使用 Command line interface

方便客製化設計

支援結果繪出 ESRI ASCII Raster format, 能支援動態模擬

工廠資訊匯入

設計

基本

時間單位:分鐘

空間單位:1m 平方,1m 立方

Cfg: 設定參數,包含各個 Producer 的常態特性,動態特性參數

有邊界

Producer

Village: 一般性的,內含人車以及基本產生量

Population:人口

Car:車輛 Factory:

Combustion:特定燃燒

Consumer

Climate:下雨,颱風等

Deposition: 沈積

Effect

Wind:

Diffusion:

Boundry

邊界只有平均值,沒有累積量

Status

Map:整張地圖

Position:固定長寬的空間,用X@Y來index

pm_total: pm 總量

pm_value: pm 量測值 ug/m3

Area: 一堆 Position 的組合

設定

地理

以經緯度範圍設定模擬區域

精細度可選

100m, 1km, 10km

基本演算法

持續 monitor status
Producers 給予特定的產生條件,持續產生
Consumer 持續減少數值
Apply effects

total ↔ value

固定空間大小來當除數

配上高度比例,分成生活段(可量測)與高空段(未量測)

跨邊界效應

邊界以 value 標示,total 無限 污染離開邊界,會更新邊界 value 值 污染由邊界傳入,需計算 value * 時間為傳入量 邊界值可以依模擬條件,隨時更新,或由模擬條件漸進更新

Files/Directories Definition

doc

README.txt: release note

Codes : codes Include :

sim.ini

Output

ESRI export naming rule:

output/name_timestamp.asc (ex: abc_20160708210000.asc)

output/name.xml sim.log: system log

Lib: the code that may easy to be reused

test:

sim.py: startup program

帶起步驟設計

Basic fundation, classes/cfg/reporting 車輛與沈積效應的平衡 Wind effect + boundry handler 大地圖, grouping → 走向全台灣模擬 Climate effect Real data input, real data comparsion

Versions

V0.0.1

Basic application fundation, CFG, logging, CLI, unit test, simulation Quick support Deposition, Car, Population

V0.1

Export ESRI Some setting from file Quick wind effect

Installation

We use python 3 pip3 install simpy pip3 install configobj pip3 install matplotlib pip3 install numpy

執行

python3 sim.py

Study

Plot Data Points on a Map

Current Progress

```
wuulong$ python3 sim.py
